

Marine Wiper System Kit

212 Pantograph

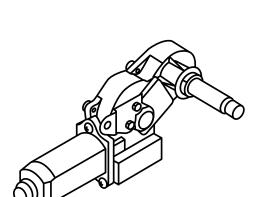

705-0037 Rev. 0 5/2/2018

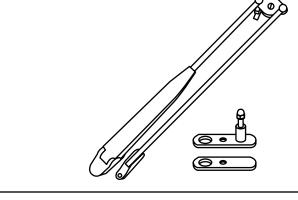

Kit Includes:

1 DC Gear Motor Assembly (212-2201 for fiberglass hull kit; 212-2001 for aluminum hull kit)

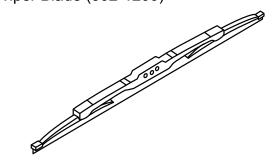

1 Wiper Arm with Pantograph Adapter and rubber gasket (114-1202)

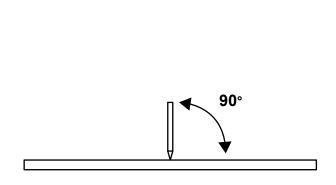

1 Wiper Blade (302-1200)

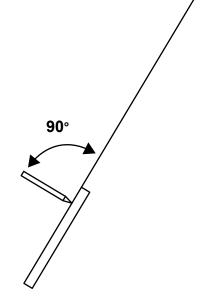

It is very important the wiper motor remain in the parked position. Do not start the wiper system until arms and blades are installed.

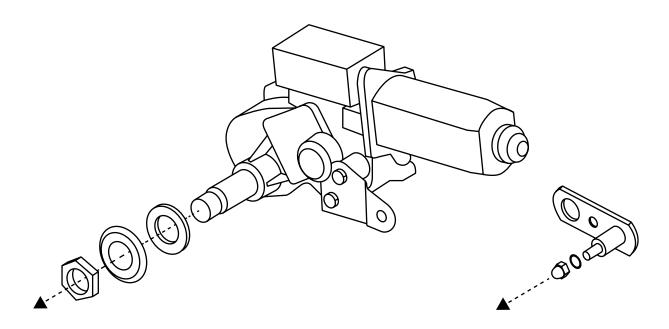

1. **Skip this step if you are replacing an existing windshield wiper system.** Mark location for pivot shaft on outside of bulkhead. Drill a 17 mm (11/16") mounting hole through bulkhead, perpendicular to windshield at marked location. Mark corresponding location for motor assembly mounting tab hole. We recommend using a stainless steel mounting bolt and nut, up to 6 mm (1/4"), (not included) for this attachment. Drill an appropriately sized hole for your hardware through bulkhead, perpendicular to windshield at marked location.

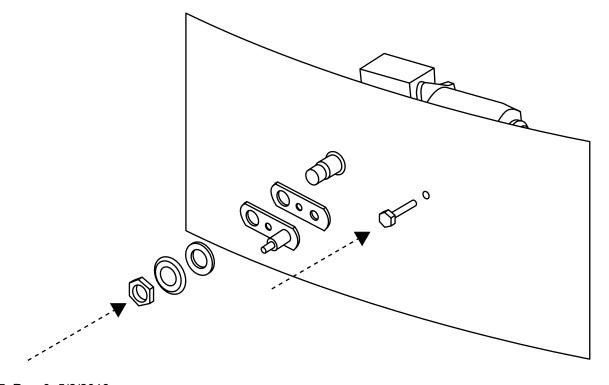

705-0037 Rev. 0 5/2/2018 2

2. Remove nut, washer, and rubber seal from motor assembly (212-2201). Remove nut and washer from pantograph adapter.

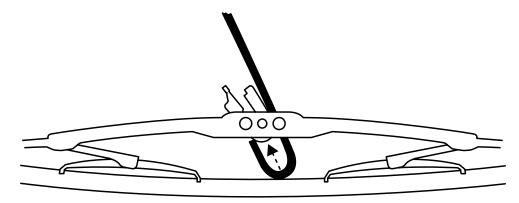

- 3. From inside boat, insert motor assembly pivot shaft through 17 mm (11/16") drilled hole and align motor assembly mounting tab hole with other drilled hole.
- 4. Install rubber gasket and pantograph adapter over pivot shaft, aligning mounting holes in gasket and pantograph adapter with second drilled hole in bulkhead. Reinstall rubber seal, washer, and nut onto motor assembly pivot shaft and torque M16 nut to 11 Nm (8 lb.ft). Install mounting hardware (bolt or screw, not included) to secure motor assembly mounting tab to bulkhead, either from inside or outside hull. Seal holes in bulkhead around pivot shaft and mounting hardware with high-quality urethane caulking from motor side of bulkhead.

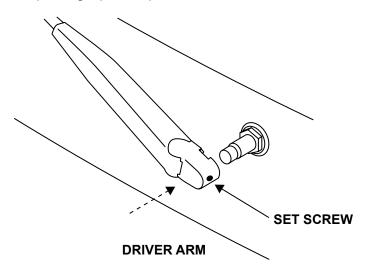

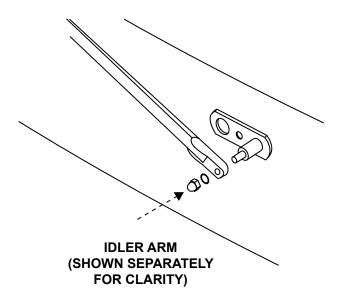

705-0037 Rev. 0 5/2/2018 3

5. Attach the wiper blade (302-1200) to the wiper arm (114-1202) by hooking J-shaped end of arm around wiper blade adapter (with tab end of adapter facing open end of J) until it clicks into place.

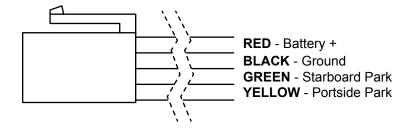

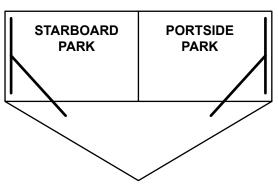

6. Determine your preferred windshield wiper park position with wiper blade parallel to vertical window edge. Loosen set screw in driver arm mounting head. To install wiper arm, place driver arm mounting head over pivot shaft and idler arm mounting head over pantograph adapter shaft with arm and blade in desired park position. Tighten set screw to 4.5 Nm (40 lb.in). Reinstall washer and nut on pantograph adapter shaft over idler arm mounting head.

7. Wire your windshield wiper system.

Park positions are referenced from an "in front of the bow looking at windshield" view.

If wipers are top mounted, park positions are opposite (yellow is starboard and green is portside).
